## 9. AC POWER LINE CONDUCTED EMISSIONS

### 9.1. TEST CONDITIONS

Test performed by :Laurent DENEUX  
Date of test :2013/07/23  
Ambient temperature : 22°C  
Relative humidity : 51%

### 9.2. TEST SETUP

The product has been tested according to ANSI C63.10 (2009) method. The EUT is placed on the ground reference plane, at 80cm from the LISN. The distance between the EUT and the vertical ground plane is 40cm. Auxiliaries are powered by another LISN. The cable has been shorted to 1meter length. The EUT is powered through the LISN. Measurement is made with a receiver in peak mode. This was followed by a Quasi-Peak, i.e. CISPR measurement for any strong signal. If the average limit is met when using a Quasi-Peak detector, the EUT shall be deemed to meet both limits and measurement with the average detector is unnecessary. The LISN (measure) is  $50\Omega / 50\mu\text{H}$ . Interconnecting cables and equipment's were moved to position that maximized emission.

## 10. UNWANTED EMISSIONS INTO RESTRICTED FREQUENCY BANDS

### 10.1. TEST CONDITIONS

Test performed by : Laurent DENEUX  
Date of test : 2013/07/23 & 2013/10/28  
Ambient temperature : 20 °C to 35°C  
Relative humidity : 51%

### 10.2. TEST SETUP

The product has been tested according to ANSI C63.10 (2009). The EUT is placed on an open area test site. Distance between measuring antenna and the EUT is 10m. Test is performed in horizontal (H) and vertical (V) polarization with bilog antenna below 1GHz and with a horn antenna above 1GHz. Measurement bandwidth was 120kHz below 1GHz and 1MHz above 1GHz. The level has been maximised by the turntable rotation of 360 degrees range on the 3 axis of EUT. Antenna height search was performed from 1 to 4m.
