## 2.2. RUNNING MODE

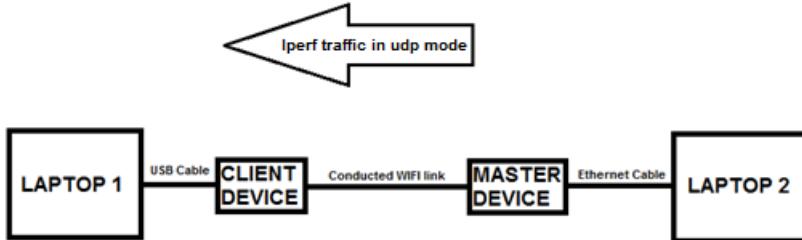

The EUT is set in the following modes during tests:

- Emission-reception with a duty cycle above 17% in the data rate that produced the highest output power

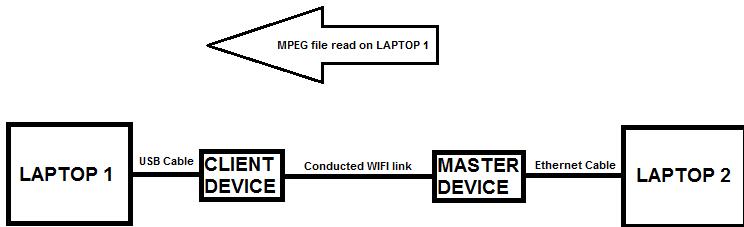

Following commands with the specific test software “TERATERM” are used to set the product:

- See document “Procédure DFS Fast5260\_2018V2.docx” for the command used during test

- System testing is performed with iperf test software in udp mode from the Master Device to the Client Device on the test channel. The data traffic is performed Laptop 2 to Laptop 1

- System testing is performed with the designed MPEG test file (<http://ntiacsd.ntia.doc.gov/dfs/>) that streams full motion video at 30 frames per second for channel loading from the Master Device to the Client Device on the test channel. This MPEG file is played via 2 laptops as follow:
